

2010-2011 Season Citrus Highlights U.S. and Florida Production

Citrus utilized production for the 2010-2011 season in the United States totaled 11.7 million tons, up 7 percent from the 2009-2010 season. Florida accounted for 63 percent of the total United States citrus production with 7.4 million tons of citrus in the 2010-2011 season, California totaled 33 percent, and Texas and Arizona produced the remaining 4 percent.

Florida's total 2010-2011 citrus utilization of 165.9 million boxes increased 4 percent from the previous season. The other 3 states had increases in citrus production, too: California, 11 percent; Texas, 14 percent; and Arizona, 15 percent.

Florida's all orange production increased 5 percent to 140.3 million boxes. Navel production was 2.65 million boxes, up 15 percent from last season. Grapefruit utilization in Florida, at 19.8 million boxes, was down 3 percent from the 2009-2010 season's utilization. All tangerine production at 4.65 million boxes was up 4 percent from the previous season's 4.45 million boxes. Utilization of tangelos was up 28 percent at 1.15 million boxes.

Tree Inventory

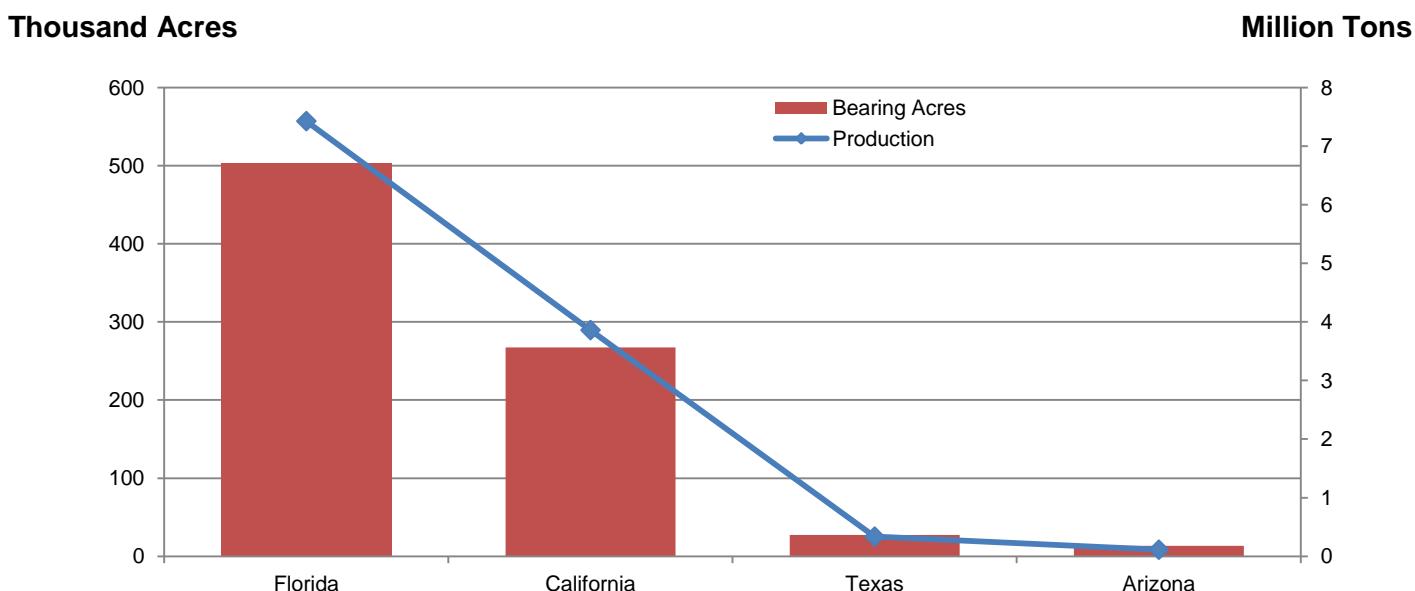

Results of the annual commercial citrus inventory show total citrus acreage is 541,328, down over 2 percent from the last survey. Compared to the previous inventory, the net decrease of 12,709 acres is less with a lower gross loss (21,769) and fewer new plantings (9,060).

Of the 30 counties included in the survey, 23 recorded decreases in acreage, 5 showed increases, and 2 are unchanged. Martin County, down 4,567 acres, has suffered the greatest loss for three straight years and has been declining since 1994. Desoto County has recorded gains in the last 4 surveys and this year's gain of 739 is the most of any county. Polk remains the leader in acreage with 82,577.

Orange acreage declined for the seventh consecutive survey to 473,086, the lowest since the record low of 466,252 tallied in the 1986 inventory. Grapefruit acreage fell to a new low of 48,990, representing only 55 percent of the pre-hurricanes figure while specialty acreage continued to decline to a record low of 19,252.

Total citrus trees are down over 2 percent from 72,164,800 in 2010 to 70,640,700 in 2011. Polk is the new leader with nearly 9.9 million trees, followed closely by Hendry with 9.7 million, DeSoto with 8.4 million, and Highlands with 8.0 million trees. Of the total, oranges comprise over 88 percent; grapefruit, almost 8 percent; and the remainder, including specialty and other citrus, at 4 percent. Since 2010, bearing trees decreased nearly 3 percent to 65,908,700 while non-bearing trees increased by almost 5 percent to 4,732,000.

Leading Citrus States: Bearing Acreage and Production, Crop Year 2010-2011

Production by Areas and Counties

Total citrus production in 2010-2011 was up in the Central and Southern areas but down in Indian River, Northern, and the Western areas from the 2009-2010 season. The Northern and Western areas were down the most with decreases of 968 thousand and 915 thousand boxes respectively. Indian River production of grapefruit was unchanged and losses in late season Valencia oranges were nearly offset by increases in the early and midseason orange varieties. The top 5 citrus producing counties were Polk (29.8 million), Highlands (23.1 million), Hendry (19.3 million), DeSoto (17.5 million), and Hardee (12.8 million). The greatest losses of production occurred in Martin and DeSoto counties.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2010-2011 United States citrus crop increased slightly from last season, to \$2.98 billion (packinghouse-door equivalent). Orange value of production decreased 1 percent from last season and grapefruit value is down 6 percent. Tangerine and mandarin value of production is 15 percent higher than last season and lemon value of production is up 1 percent. Tangelo value increased 48 percent from the previous season.

Florida's \$1.145 billion preliminary on-tree value of the 2010-2011 citrus crop is 2 percent greater than the revised value of \$1.118 billion for 2009-2010. The price per box is higher for non-Valencia oranges, tangelos, and Honey tangerines. The tangelo on-tree value increased 58 percent from last season. Only the grapefruit on-tree values are lower.

Citrus Value of Sales On-Tree-Florida: Crop Years 2001-2002 through 2010-2011

Crop year	Value ¹ (1,000 dollars)	Crop year	Value ¹ (1,000 dollars)
2001-2002	966,803	2006-2007	1,499,112

³ Preliminary.

2010-2011 Citrus Box Weights: Approximate net weight by fruit type and states

State	Orange (pounds)	Grapefruit (pounds)	Tangerine (pounds)	Lemon (pounds)	Lime (pounds)
FL.....	¹ 90	85	95	90	88
CA	² 80	³ 80	² 80	⁴ 80	(X)
TX	85	80	(X)	(X)	(X)
AZ	(X)	⁵ (X)	² 80	⁴ 80	(X)

X Not applicable.

¹ Includes Temples and tangelos at 90 pounds.

² Was 75 pounds prior to the 2010-2011 season.

³ Was 67 pounds from 1993-1994 to 2009-2010 and 65 pounds prior to the 1993-1994 season.

⁴ Was 76 pounds prior to the 2010-2011 season.

⁵ Was 67 pounds from 1993-1994 to 2008-2009 and 64 pounds prior to the 1993-1994 season.

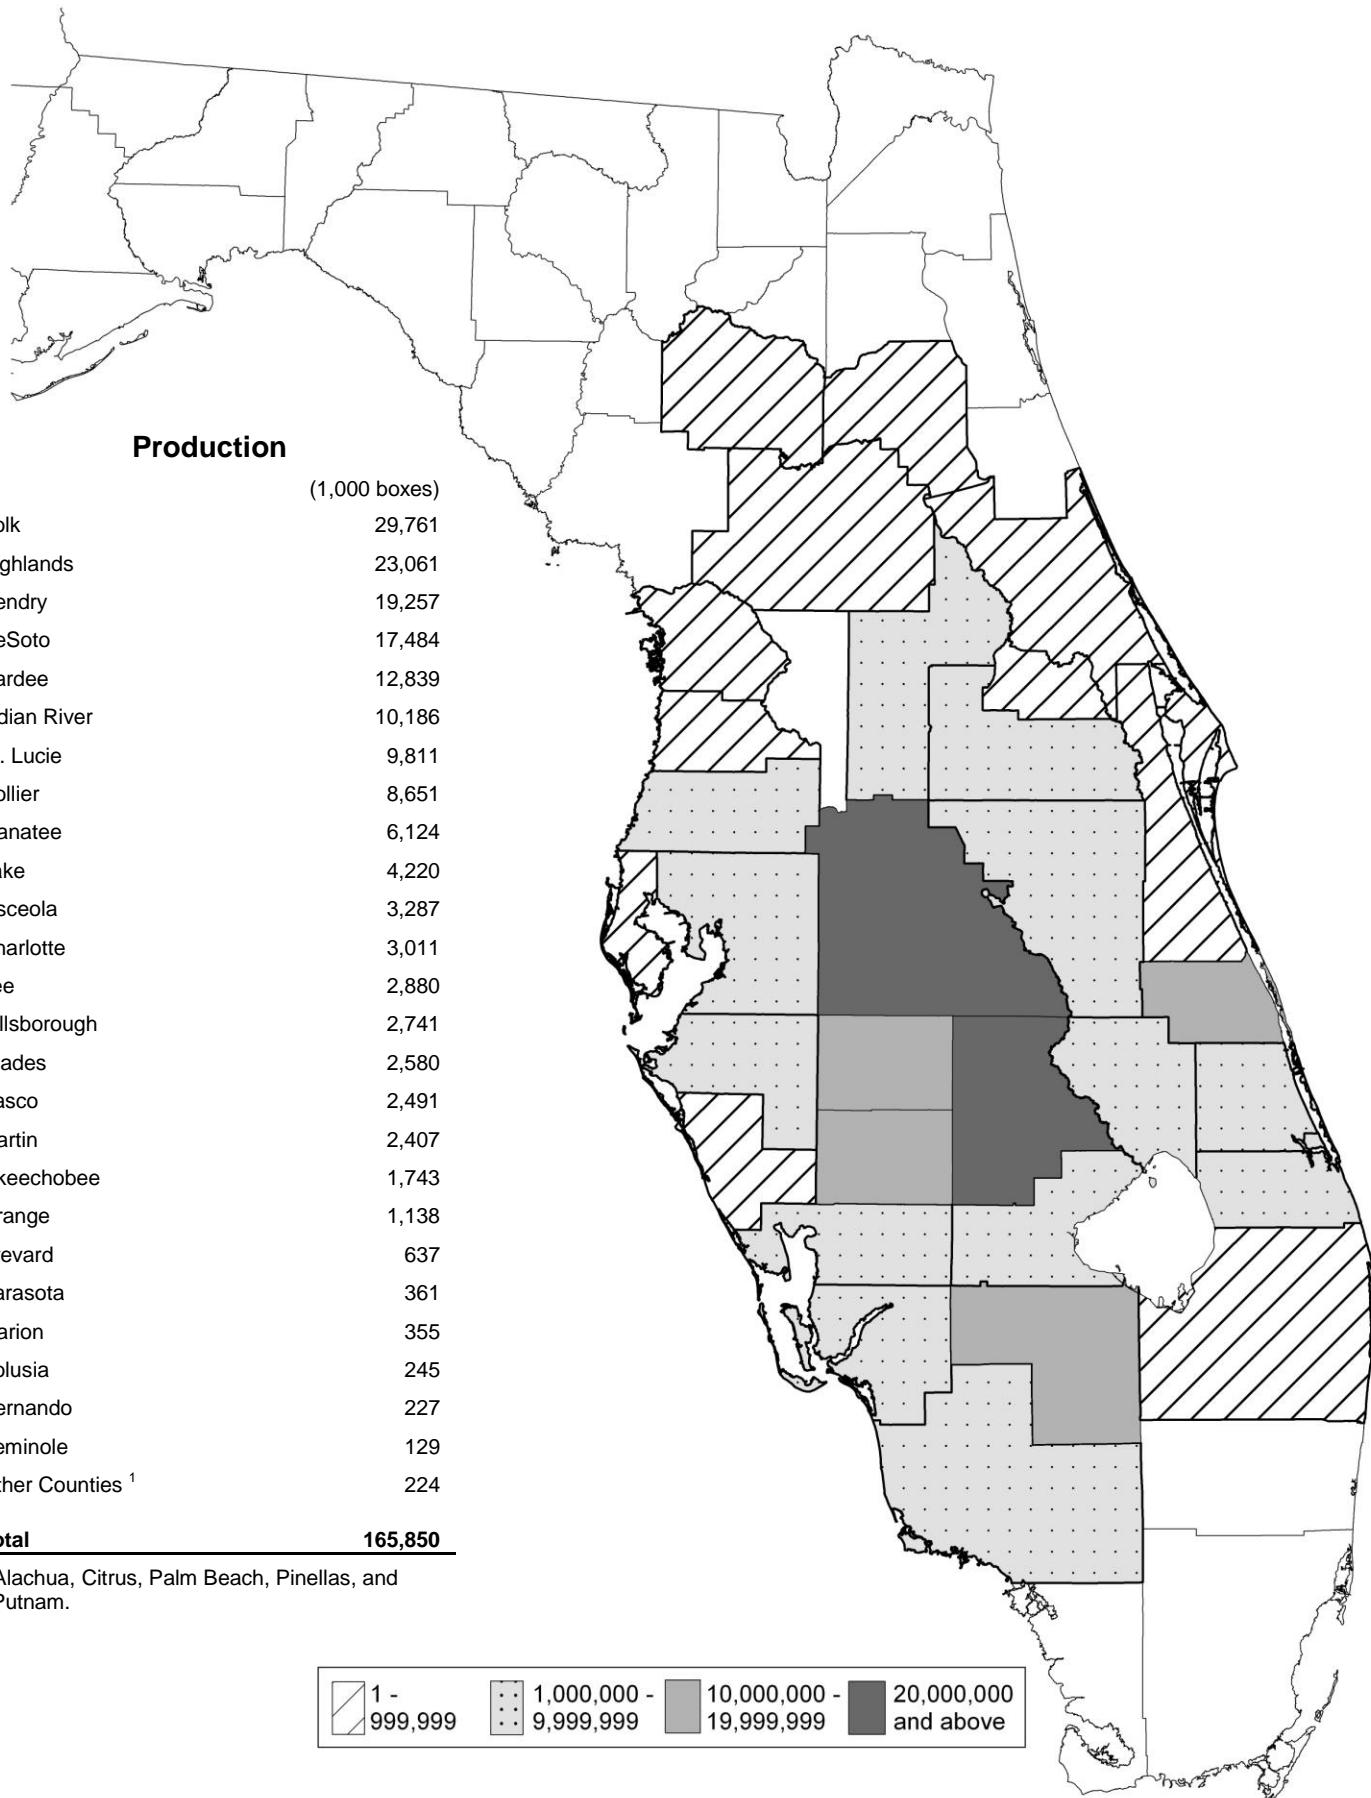

Foreign Exports and Frozen Concentrate

Fresh fruit exports totaled 11.2 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 28.5 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 5.8 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2010-2011 season.

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.586081 gallons per box of 42° Brix concentrate, far below the record of 1.672737 set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.522652 gallons per box. The late crop yielded 1.664737 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.327872 gallons per box of 40° Brix concentrate. The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.528083 gallons per box of 42° Brix concentrate was higher than last season's final of 1.438629 gallons per box.

Florida Citrus Harvesting Season

Avocados in Florida

Production of Florida avocados decreased from the previous season by 28,000 bushels, or 3 percent. Bearing acreage is estimated at 7,400 acres. The price per bushel was \$20.00, up 33 percent from the previous season, bringing the value of crop production to \$18,000,000.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California, and are available from June through the end of February.

Avocado Trees, Acreage, Yield, Production, Utilization, Price, and Value, — Florida: Crop Years 2001-2002 through 2010-2011

Crop year	Bearing trees	Bearing acreage	Yield per acre	Production	Price per bushel ¹	Value of production
	(1,000 trees)	(1,000 acres)	(bushels)	(1,000 bushels)	(dollars)	(1,000 dollars)
